UHD 4K2K

The sharp 4K UHD display is 16:9 in 3840X2160 high resolutions, which is four times higher than Full HD displays. The enhanced sharpness can now be easily seen and takes your visual experience to a new level.

BlueLightShield •

Acer BlueLightShield™ reduces the exposure ratio of blue light, which can potentially cause long-term eye damage, by adjusting color hue and brightness.

Acer HDR Ready™ technology

HDR is a display technology that creates deeper levels of black and white contrast, giving you a greater level immersion through realistic image recreation. Using scalar chip decoding and mapping technology, the Edge-lit LED panel and global dimming functionality, the EB550K display pulls you in to the lifelike contrast and color of HDR.

Flicker-less

A constant image's refresh rate may flicker up to 60 times a second, although human's eyes hardly recognize the circumstance. The flicker screen is less visible, but makes eyestrain, even damage eye health, especially for those heavy monitor users. Acer Flicker-less monitors can eliminate annoying screen flicker, and provide comfortable viewing experience.
